1. Learn and integrate: Through independent learning and collaborative study, students will attain, use, and develop knowledge in biology, chemistry, and related disciplines with specialization in biochemistry.

Students will be able to integrate biological and chemical information to understand the biochemistry of molecules and living systems.

2. Think and create: Students will be able to use multiple thinking strategies to examine issues in biochemistry, including the proposal of biochemical hypotheses and the design and analysis of biochemical experiments capable of testing hypotheses. Students will be able to apply biochemical knowledge to real world challenges, such as those that may be encountered in medicine and other applied areas.
3. Communicate: Students will be able to acquire and analyze biochemical information from the scientific literature. Students will be able to communicate biochemical information via verbal, written, and other non-verbal methods such as appropriate graphics.
4. Clarify purpose and perspective: The program will allow student to explore biochemistry in the context of their career and life's purpose as well as to apply perspectives to novel issues or problems within biochemistry or other disciplines.
5. Practice citizenship: Students will understand and accept their roles as educated biochemists and scientists in society. Students will be able to communicate with others, including non-scientists, from the special perspective of an educated biochemist.
